

How to build a community

Philipp-Alexander Blum

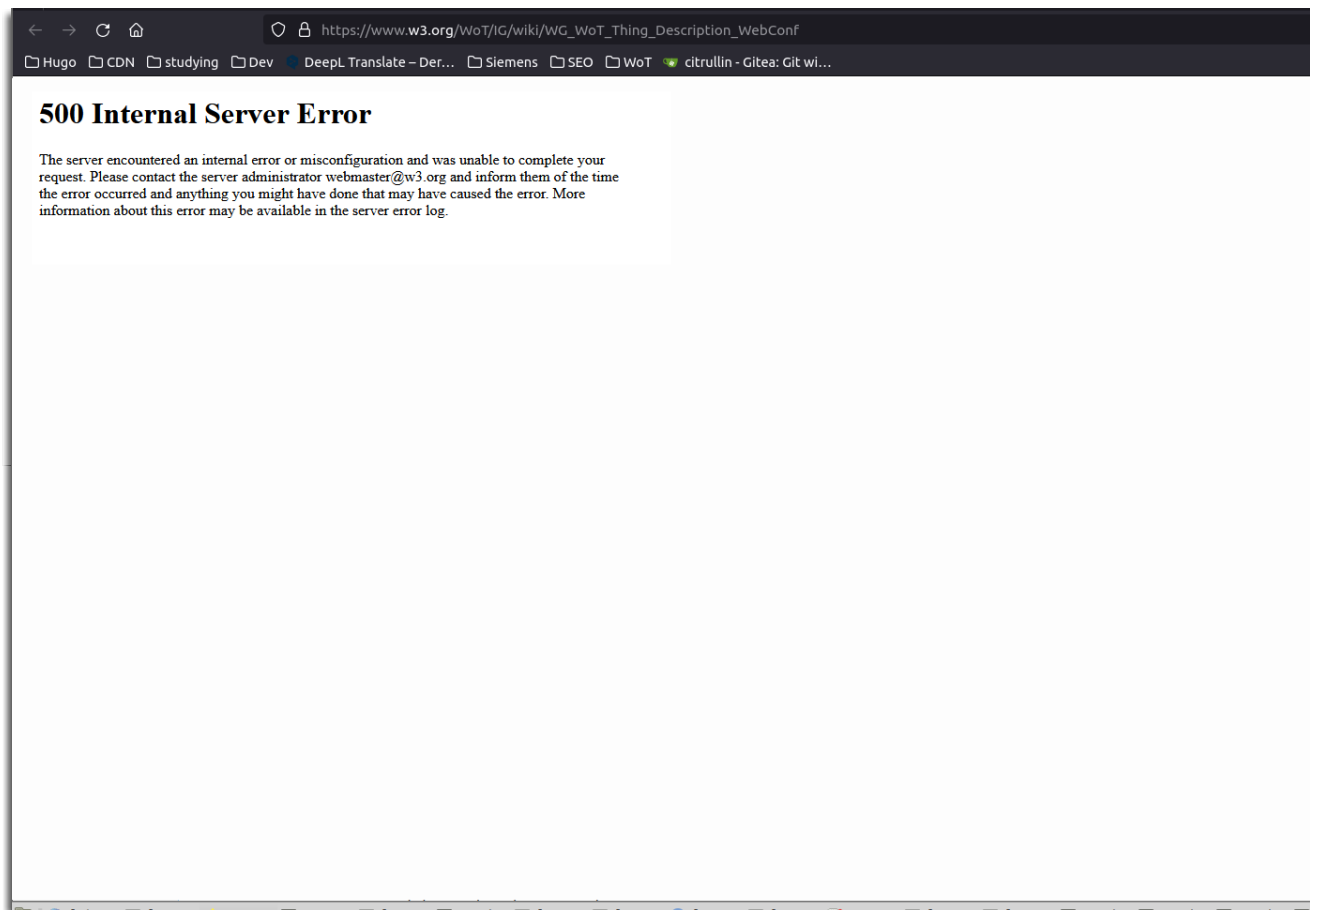

Vita

- Tech-Blogger (Tabtech.de, bought by GIGA Tech)
- TV commercials, Online-Marketing, Development (Tollabox)
- Big data analytics & MarTech (Webtrekk, bought by Mapp Digital)
- Cryptocurrencies & DLTs (IOTA Foundation)
- Pushing Open Source and Open Standards forward (Bind.systems)

Infrastructure

(Or rather the lack of it...)

Collaboration

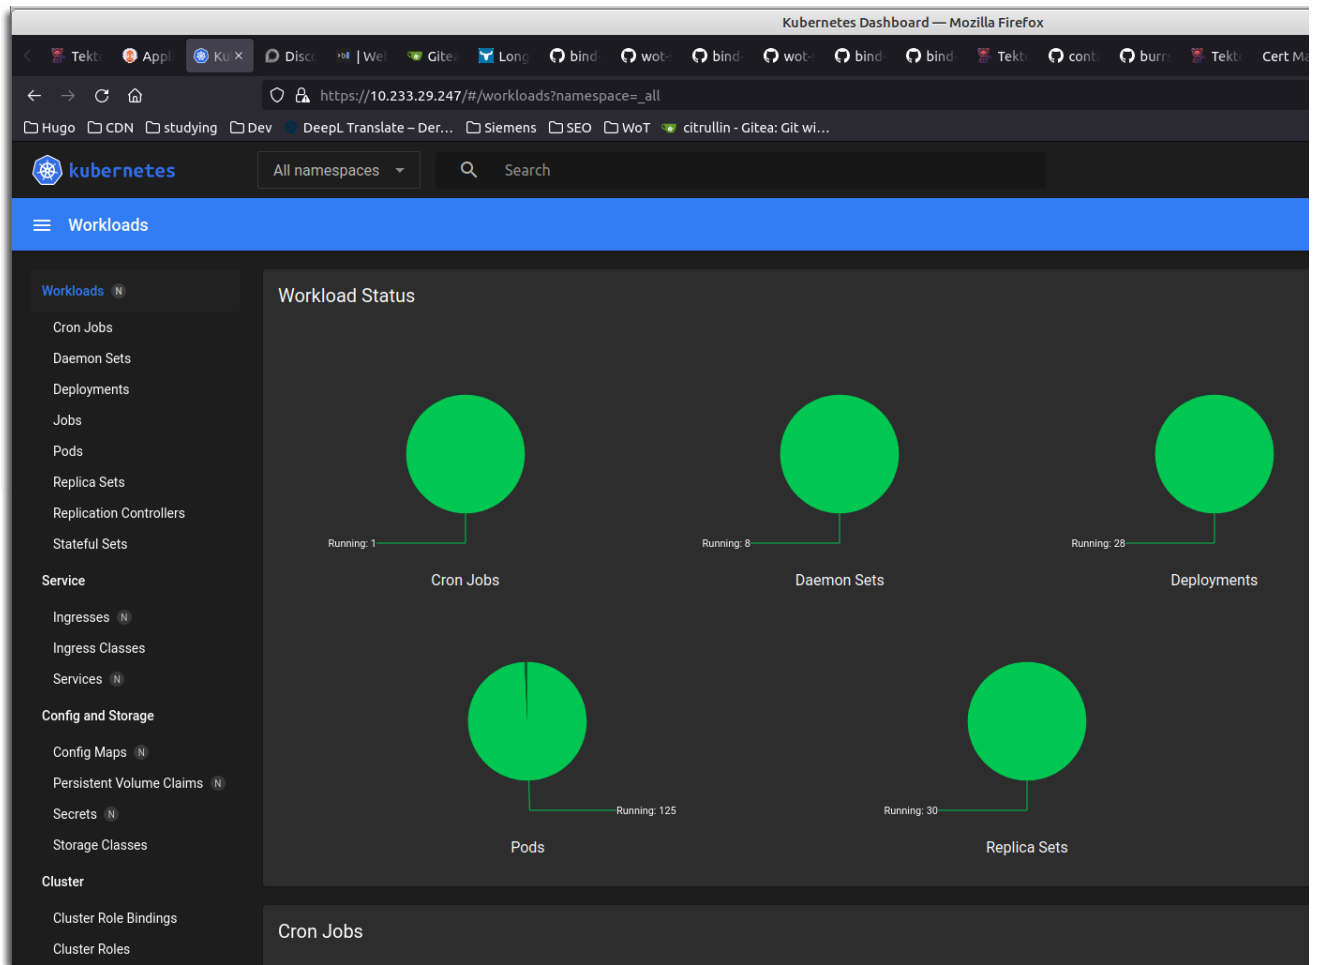

Collaboration

- Open source development tools
- Open source communication tools
- Validation & Verification
- Community Support

Webofthings.dev

Webofthings.dev

- Reliable and scalable kubernetes cluster
- 6 machines for the beginning
- Funds allocated for one year to support the machines

Hardware

2x RAM Server

- Intel (6 cores @ 3.5 Ghz)
- 128 GB RAM
- 4x 240GB SSD
- 1 Gbit/s

4x Storage Server

- AMD (6 cores @ 3.6 Ghz)
- 64 GB RAM
- 2 x 512 GB NVMe SSD
- 1 Gbit/s

Data safety

(4 Level data safety)

1. RAID 1 against individual disk failures
2. Block storage with replication factor 3
3. Database replication factor 3
4. Backups in s3 buckets

Roadmap

(OR WHAT IS NEXT?)

ALREADY DONE

- Initial Kubernetes setup
- Initial CI/CD Tooling
- Data safety system

NEXT

- Unified user management system across open source tools
- Consistent design across community tools
- Discussions, Chat and basic tools and bots
- Payment system to sustain community

Still a lot to do though!

Demo?
